Boston Architectural College

The Boston Architectural College, with buildings on opposite sides of trendy Newbury St. in back bay Boston, MA, desired a high capacity wireless link between their buildings. Through its partnership with the Sullivan & McLaughlin Companies, FastLinks was brought in to design and install a GigE (1.25Gbps, full duplex) free space optic system, which needed to be installed as inconspicuous as possible. The project was completed within a few days, and the customer can now transmit large files between buildings without delay.

FYI – Founded in the 1880s as a club for architects in the Boston area, the BAC has maintained close ties to the professional design community throughout its history. One of the most unique characteristics of the BAC is the concurrent learning model: experiential practice in the field, intellectual academic learning in the classroom.
