Rockefeller Group Technology Services

The Rockefeller Group Technology Services organization had a client with a temporary need for a high capacity LAN connection between buildings on opposite sides of 6th Street in Rockefeller Center. They turned to FastLinks who was able to rapidly deploy a 100Mbps, PoE FSO link between the sites, which was leased on a month to month basis. What made things challenging was the mounting locations of the two FSO units. At one side, the wireless unit was placed indoors behind glass and at the other in an air shaft, subject to constant vibration, where the FSO unit had to shoot through a narrow opening.

FYI – Rockefeller Center is a complex of 19 commercial buildings covering 22 acres in midtown Manhattan. It was built by the Rockefeller family in the 1930's and was designated a National Historic landmark in 1987.
