

# FASTLINKS

## Slattery Skanska, Inc.

As is the case with many of FastLinks customers, Slattery, Skanska had run out of office space in its current building and needed to expand to a nearby facility. In their case, a building was a “stones throw” away. They came to FastLinks to help them establish a 100BaseT (100Mbps) wireless link to support both data and VoIp applications. Based on the short distance between the sites, and the desire for a 100Mbps connection, FastLinks recommended a cost effective FSO link that shipped within days of request and cost only \$3,900.

*FYI – Slattery, Skanska has been involved in many prominent projects including the 1.2 billion JFK Airport LightRail System, the \$550 million rail extension to the San Francisco International Airport, and almost \$1 billion worth of work to reconstruct portions of the Central Artery/Tunnel in Boston.*
